

KAZUYA SATO

DEVELOPER

WORK EXPERIENCE

Metro Pacific Tollways Corporation
Quezon City - Philippines
Web Developer
2023 - 2024

Enhanced the performance of existing web applications through code refactoring and optimization techniques. Leveraged backend development skills to build RESTful APIs for payment and parking functionalities, implementing business logic to ensure accurate processing.

MPT Mobility
Quezon City - Philippines
Front-End Developer
2021 - 2023

Developed and maintained a secure web application utilizing modern CSS frameworks and JavaScript libraries. Implemented robust error handling and optimized code execution to prevent memory leaks and ensure efficient resource utilization.

Seels Teachers Academy
Waseda - Japan
Database Manager
2019 - 2020

Managed a comprehensive database of aspiring teachers, tracking payments and course enrollment. Maintained accurate student records to determine eligibility for teaching licensure.

EDUCATION

STI College
Bachelor of Science in Information Technology
2015-2019

San Mateo National Highschool
Secondary Education
2010-2014

Dibz Admin Dashboard AngularJS

This project provides a comprehensive parking management system for tenants, garages, and partnered establishments (condos, malls, commercial spaces, etc.). It offers the following key functionalities:

- **Tenant Management:** Tracks user information for those who download the app and create accounts, enabling them to view their transaction history and credit balances.
- **Inventory Management:** Maintains a centralized inventory of tenants utilizing the system, available parking garages, and partnering establishments.

Garage and Attendant Dashboard Angular 2

This project offers a comprehensive parking management system with two key management dashboards:

- **Tenant Garage Management:** Allows tenants within an establishment to register their garages and opt-in to our service, leasing out their parking spaces for additional income.
- **Attendant Management:** Manages the records and access levels for attendants assigned to various establishments. This ensures they can operate the system effectively, grant access to users, and provide assistance when customers encounter difficulties.

Toll Wallet Dashboard ReactJS

This project provides CCLEX with a robust user management system specifically for DriveHub app users who also possess EasyTrip RFID accounts. Key functionalities include:

- **Centralized User Management:** Efficiently manage records for users registered on the DriveHub app and linked with EasyTrip RFID accounts.
- **Advanced Reporting:** Generate comprehensive transaction history reports based on user-defined date ranges, providing valuable insights for CCLEX.
- **Streamlined Account Management:** Facilitate manual account reloads directly within the system, expediting user experience and integrating seamlessly with CCLEX's existing reloading API.

Toll Wallet POS React Native

This web-based mobile app seamlessly integrates with the TollWallet dashboard, empowering tollway cashiers to:

- **Provide Efficient Customer Service:** A user-friendly interface streamlines the process of reloading RFID accounts for customers, reducing wait times and improving overall customer experience.
- **Accept Diverse Payment Methods:** The app caters to a wider range of customers by supporting various payment options, including e-wallets, credit/debit cards, and bank transfers.

Condo Parking API Python Django

This API serves as a powerful integration tool for parking management systems, offering key functionalities:

- **Seamless Online Payment Integration:** Enables condo parking users to conveniently reload their parking credits through online payment channels.
- **Tenant Garage Leasing Management:** Facilitates condo tenants in leasing out their unused garages, generating additional income.
- **Comprehensive User Management:** Provides a centralized system for managing user information and tracking their transaction history, ensuring transparency and efficient record-keeping.
